

WHAT IS LIVING WATER?

An Automated, Low Cost Solution to Enhance Your Soil

Unlock Your Farms Potential

Are you ready to increase crop yields and improve the overall quality of your crop?

Introducing Living Water – a revolutionary, low-cost, automated solution designed to enhance your soil biology and optimize your irrigation. Experience healthier soils, more robust crops, and more efficient fertilizer usage, all in one process.

Living Water is a patent pending, automated system that enriches your soil microbiome with beneficial microbes, fungi, and bio-stimulants with each irrigation, automatically applied every time you irrigate, throughout the growing season with ZERO application costs.

Living Water is a powerful system that ensures that your crops receive a continuous supply of nature's vital soil microbials, restoring the natural soil microbiome which promotes healthier, stronger crops.

**An affordable
Biological Solution**

Key Benefits:

- Increase Soil Biology
- Zero Application Costs
- Increased Soil Health
- Increased Biological Carbon
- Increase Nutrient Availability
- Increased Plant Health
- Increase Microbial Activity

How Does Living Water Work?

One of the greatest values of Living Water is it's ease and simplicity. It requires no expensive equipment, no change to your current operations, and less than 15 minutes of monthly maintenance. Our Patent-Pending System enables us to turn a standard IBC tote into a purpose-built Bio-Reactor on your farm. Living Water connects to your existing water supply and irrigation system in as little as 30 minutes of setup time.

"Inoculate, Stimulate and Regenerate - Every Time You Irrigate"

ALL ABOUT MICROBES

Includes the Most Scientifically Studied Microbials Known to Enhance Soil Health and Regenerate Soil Strength

Soil Phix

A comprehensive blend of the most scientifically studied beneficial microbes available and their supporting inputs to ensure microbe viability. These Microbes come in a shelf-stable powder form, that are activated when mixed inside the Living Water Tank.

Soil Phix is designed to be propagated on-site and used with the Living Water System Bio-Reactor and Tank. This process ensures freshness of product, increased population of active microbials and promotes a healthier soil.

Compatible with any nutrient program you're already using. Soil Phix reduces crop and soil stress and supports the natural processes that helps crops grow stronger and healthier.

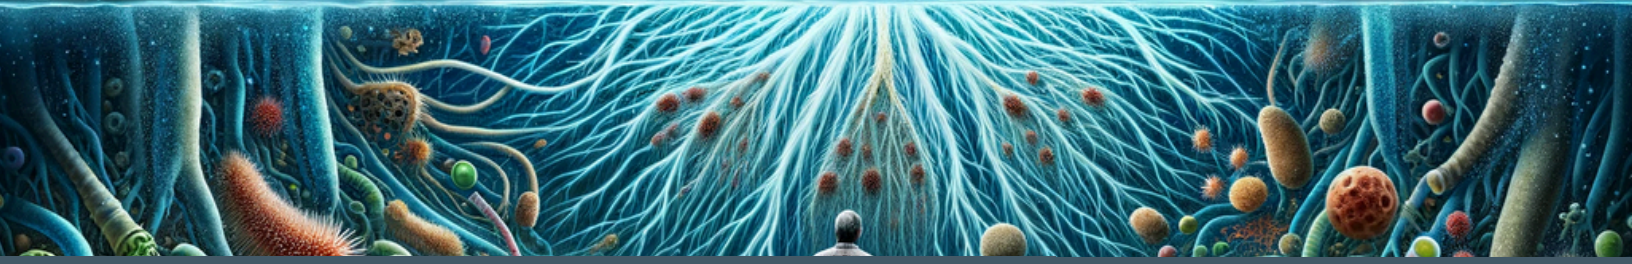

Unlike other biological or compost tea products that arrive in jugs or tanks which may lose their effectiveness before they're applied, Living Water is always fresh. It's applied continuously through your irrigation system.

The bacteria, fungi, and bio-stimulants in Living Water are freshly activated and applied with each and every irrigation cycle, providing an oxygenated, biological boost to your crops. This creates a sustainable, self-regenerating system where crops thrive, naturally.

The Species:

INCLUDED MICROBIAL SPECIES IN LIVING WATER:

- Glomus Intraradices
- Glomus Mosseae
- Glomus Deserticola
- Glomus Fasciculatum
- Bacillus Subtilis
- Bacillus Firmus
- Bacillus Coagulans
- Rhizopogon Villosullus
- Trichoderma Harzianum
- Trichoderma Reesei
- And Many Many More!

THE RESULTS

Applying Living Water automatically, with every irrigation, for a 5 month period, at 2 gallons per acre, across 11 fields, (800 acres) has significantly improved soil biology. See test results below:

+25% NUTRIENT AVAILABILITY

The carbon-to-nitrogen ratio increased from 6:1 to 10:1, reflecting enhanced organic matter and nutrient cycling. Your results may vary, but across 800 acres we saw this type of consistent increase.

+226% INCREASE IN FUNGI

These results demonstrate Living Water's ability to transform soil ecosystems, promoting healthier, more balanced biological activity and long-term soil fertility.

INCREASED NITROGEN UPTAKE

LESS THAN 30 MINUTES OF SETUP

AND ZERO APPLICATION COSTS
